

PHASE 6 OF 8

Document Export (TXT, DOCX, PDF)

Milestone 6: how the edited draft becomes a downloadable file in three formats.

- TXT
- DOCX
- PDF
- Downloads

Milestone 6 — Document Export

Activity 6.1: TXT Export

```
st.download_button(
    "Download TXT",
    data=edited_document,
    file_name="legalease_document.txt",
    mime="text/plain",
)
```

Activity 6.2: DOCX Export

```
from docx import Document

doc = Document()
doc.add_heading(doc_type, level=1)
for paragraph in text.split("\n\n"):
    doc.add_paragraph(paragraph)
doc.save(output_path)
```

Activity 6.3: PDF Export

```
from reportlab.platypus import SimpleDocTemplate, Paragraph
from reportlab.lib.styles import getSampleStyleSheet

styles = getSampleStyleSheet()
pdf = SimpleDocTemplate(output_path)
story = [Paragraph(doc_type, styles["Title"])]
for paragraph in text.split("\n\n"):
    story.append(Paragraph(paragraph, styles["BodyText"]))
pdf.build(story)
```

The implemented export service prepares the edited document as TXT, DOCX and PDF. The demonstration successfully produced all three formats.

Format	Library	How it is built
TXT	Streamlit	Edited text passed straight to a download button.
DOCX	python-docx	Title heading, then one paragraph per blank-line-separated block.
PDF	ReportLab	Title style, then one body paragraph per block.

Choosing a format in the interface

The **Export Document** section offers a direct **Download TXT** button, plus **Prepare DOCX** and **Prepare PDF** buttons. A footer confirms that no generated document is automatically saved by the application.

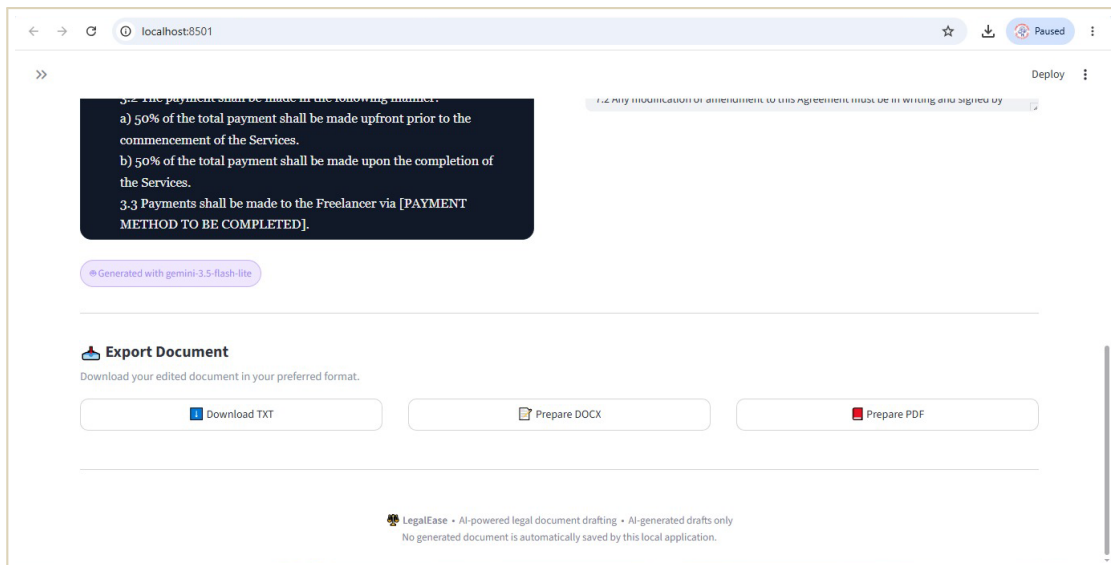

Figure 5 — Document export options: TXT, DOCX and PDF.

Two-step export for DOCX and PDF

Word and PDF files must be built before they can be downloaded, so those formats use two steps: click **Prepare**, and a **Download** button then appears. After preparing DOCX, the browser downloads panel lists the TXT and DOCX files.

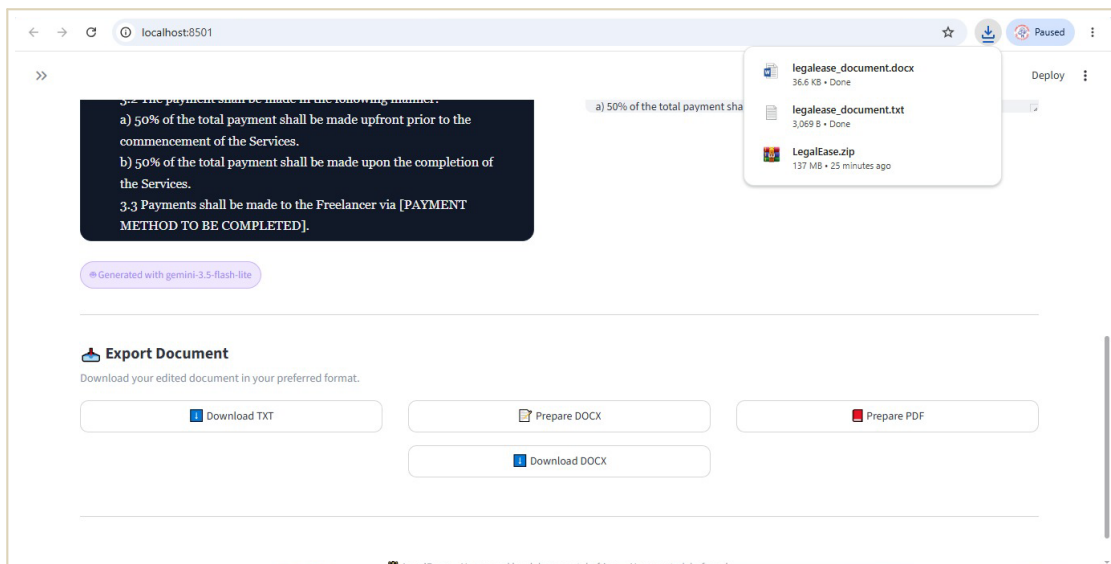

Figure 6 — DOCX export and successful browser download.

PDF download

Preparing the PDF adds a **Download PDF** button; the browser downloads panel then lists all three files from the demonstration.

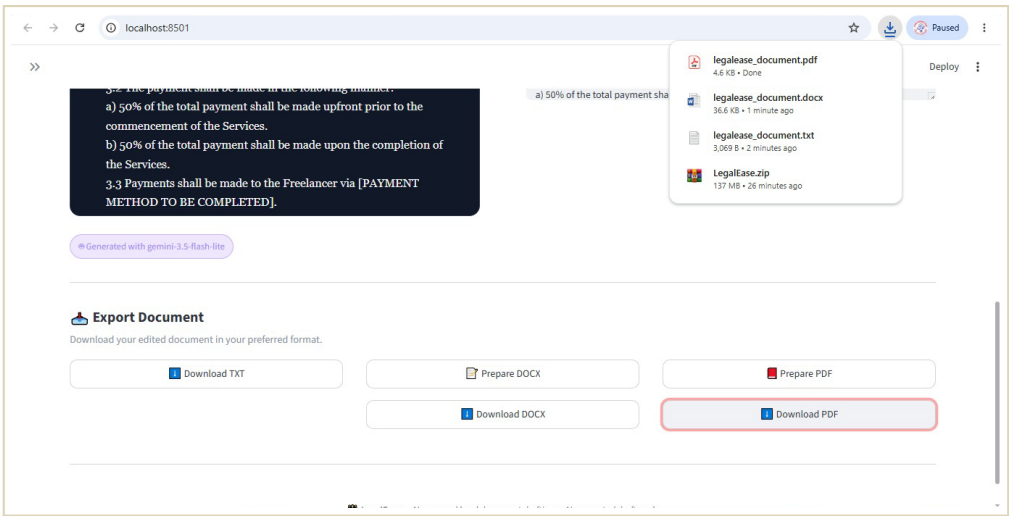

Figure 7 — PDF export and successful browser download.

The downloaded PDF

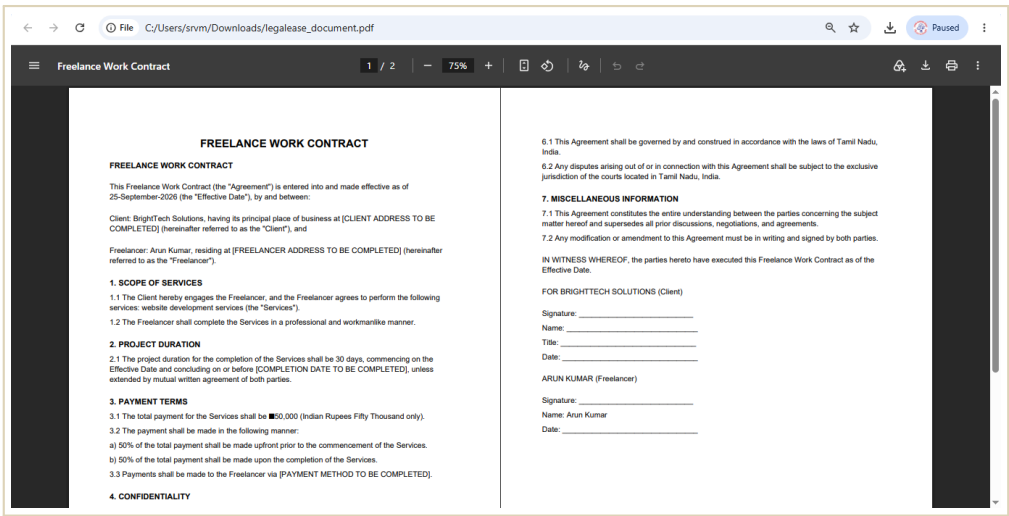

Figure 8 — Downloaded PDF file preview (Freelance Work Contract).

Exported file	Size in demonstration
legalease_document.txt	3,069 bytes
legalease_document.docx	36.6 KB
legalease_document.pdf	4.6 KB

Improvement: the rupee sign in the PDF

In the PDF preview the ₹ symbol in “₹50,000” appears as a solid box. ReportLab’s built-in fonts lack that glyph. Registering a Unicode TrueType font (for example DejaVu Sans or Noto Sans) with ReportLab and using it for the paragraph styles fixes this. Also escape &, < and > before passing text to Paragraph.
