

PHASE 8 OF 8

Evaluation, Conclusion & Future Scope

What LegalEase does well, where its limits are, how it can be used, and where it can grow.

- Advantages
- Limitations
- Applications
- Future Scope

9. Advantages and Limitations

9.1 Advantages

Advantage	Benefit
AI-assisted drafting	Produces a complete first draft from a few form fields.
Simple web interface	No technical knowledge needed beyond filling in a form.
Editable output	The user reviews and corrects the draft before export.
TXT / DOCX / PDF export	Fits plain-text, Word-editing and print/share workflows.
Modular architecture	Frontend, API, AI and export layers can change independently.
Multiple document types	The same workflow serves contracts, NDAs, leases and more.

9.2 Limitations

Limitation	How to manage it
AI output requires human review	Read every clause; have a qualified professional review before use.
Output depends on input quality	Give specific parties, dates, amounts and terms; use additional instructions.
Live generation needs API/network access	Ensure a valid key and connectivity; keep the health check handy.
Does not replace professional legal advice	Treat every draft as informational, per the on-screen notice.

10. Applications

Application	Typical use
Freelance contracts	Scope, payment stages, confidentiality and termination for project work.
Non-disclosure agreements	Protecting shared information between parties.
Employment-related drafts	Offer- and role-related documents.
Lease / rental drafts	Basic rental terms between landlord and tenant.
General agreements and contracts	Other straightforward two-party arrangements.

11. Conclusion

LegalEase demonstrates an end-to-end AI-assisted document-generation workflow using Streamlit, FastAPI and Gemini. The system collects structured user input, generates a legal-document draft, provides an editable version and exports the result in TXT, DOCX and PDF formats.

The project also demonstrates modular software design: frontend interaction is separated from API handling, AI generation and document formatting. Local testing confirmed that the implemented workflow operates successfully.

Responsible use

AI-generated documents are drafts for informational and document-preparation purposes and should be reviewed by a qualified legal professional before actual legal use.

Key takeaways

- One clear request path: form → FastAPI → Gemini → editable draft → export.
- Prompt rules (no invented facts, placeholders, disclaimer) matter as much as the model choice.
- A human review step is built into the interface, not added afterwards.
- Separate modules keep each layer easy to test and replace.

12. Future Scope

Enhancement	Value it adds
More legal document types	Broader coverage: partnership deeds, service agreements, and more.
Multilingual generation	Drafts in regional languages alongside English.
Legal database integration	Grounding clauses in verified legal references.
Clause identification and contract analysis	Highlight, explain and compare clauses in existing contracts.
Cloud deployment	Access from anywhere without a local setup.
Version history	Track and compare edits to a draft over time.
Advanced formatting and validation	Cleaner DOCX/PDF layout; checks for missing or inconsistent details.

13. Appendix — Important Code Modules

File	Role
backend/main.py	FastAPI initialization and middleware.
backend/routes.py	/generate API route.
backend/schemas.py	Pydantic request validation.
backend/config.py	Configuration loading.
backend/ai_core/gemini_generator.py	Gemini integration.
backend/services/document_service.py	Document service logic.
backend/services/exporters.py	TXT / DOCX / PDF export utilities.
frontend/app.py	Streamlit user interface.
tests/	API and exporter tests.

13.1 Security

The actual GEMINI_API_KEY is intentionally excluded from this documentation. Use .env.example when showing configuration, and never publish the real credential.

- Add .env to .gitignore so it is never committed.
- Rotate the key if it is ever exposed in a screenshot, log or repository.
- Before any public deployment, restrict CORS origins and add authentication.

13.2 Demonstration Data

Field	Value
Document Type	Freelance Work Contract
Parties	Arun Kumar (Freelancer), BrightTech Solutions (Client)
Effective Date	25 September 2026
Jurisdiction	Tamil Nadu, India
Payment	₹50,000; 50% upfront and 50% on completion
Duration	30 days
Confidentiality	Both parties must maintain confidentiality
Termination	15 days written notice
